BABY CHICKS"**

**Reuters Two "Top" Grades
of Chicks**

Reuter's are now again offering U. S. Approved Baby Chicks coming from U. S. Pullorum Passed Parent Stock. All Flocks which Reuter's Baby Chicks are produced from are rigidly culled and tested until they meet the U. S. Approved requirements. Our "AAA" Matings are from specialized egg-bred flocks mated to males which are descendants from our 4A Royal Matings—or males from Candidate matings or outstanding Males of high selection. A super-quality grade chick for those wishing next to our best grade chicks. Our Royal "AAAA" matings are R.O.P. Sired Chicks from flock matings with males that are R.O.P. Wing-banded purchased at high cost from famous specialty breeders—of the breeds listed. These are our very finest Grade Baby Chicks.

Austra X Whites are a cross between White Leghorn females and Black Australorp males, and are noted for early maturing, high egg production, health and vigor, and grow much larger than Leghorns. Try some of them.

DANISH GROWN CAULIFLOWER

Culture. Requires rich soil and abundant moisture. The only significant difference in the culture of Cauliflower and that of cabbage is that with Cauliflower the heads must be protected from sunlight in order to insure the much desired white curd. This is most readily accomplished by gathering the leaves together loosely, as soon as the heads begin to form, and tying them at the top. One ounce will produce 2000 strong plants; 1/2 pound sufficient for an acre.

144 Early Snowball. 55 days from plants. The large heads are snow-white, solid, finely grained and deep. It heads so evenly that the entire crop may be harvested within a short time after it begins to mature. The erect leaves are large and curl over the heads protecting them from the sun. The heads make a beautiful appearance on any market and sell for the highest prices. Pkt. 25c; 1/4 oz. 70c; 1/2 oz. \$1.25; oz. \$2.15; 1/4 lb. \$6.75; lb. \$25.00.

68 45 days. Distinct from other Chards; highly prized because of its superior flavor, entirely without the somewhat bitter taste of ordinary Swiss Chard. You will relish it like a good variety of spinach. The dark, glossy green leaves are fairly smooth. The lighter green midribs are tender and edible. Cooked and served as "boiling greens" in the same way as spinach. It is very hardy and withstands severe summer heat; therefore available when spinach cannot be grown. Many people who detest spinach find our green-leaved Swiss Chard a more palatable substitute. Pkt. 10c; oz. 15c; 1/4 lb. 45c; lb. \$1.35; 5 lbs. \$6.25. Thyme

Crisp **LETTUCE** delicious

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than 1/2 inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

HOW TO GROW 'EM

Rich sand loam soils are considered best for Watermelons, but good crops are grown on any well-drained, fertile soil. Adding well-rotted manure to soil gives the plants a good start and to commercial growers we recommend an application of 600 to 800 pounds of commercial fertilizer (analyzing

about 5 per cent ammonia, 7 per cent phosphoric acid, and 3 per cent potash) to the acre. Space hills at least 10 feet apart. This method will give about 360 hills to the acre. When the soil has become warm, drop 6 to 8 seeds in each hill and cover about 1 inch. Later thin to 2 to 3 of the largest plants. Earlier crops may be obtained by protecting the young plants with Hotkaps (see page 70). One ounce will plant 25 hills: 1½ to 2 pounds per acre.

Reuter's Famous ONIONS

Culture. A good, well-drained soil, reasonably fertile, will give the best crops. September and October are the principal planting months. Sow in seed-beds and when 5 to 7 inches high transplant in rows 12 to 15 inches apart and 3 to 4 inches apart in the row. In some sections the seed is sown directly in the field in rows 18 to 20 inches apart. Cultivate every 10 days to keep down weeds and conserve soil-moisture.

Onions should be pulled when the tops in the field have fallen over and dried considerably. Allow them to dry on the ground and then place in shallow racks with slat bottoms which permit free circulation of air. When fully dried the tops may be wrung off and the Onions graded. Normal yields between 100 and 400 bushels per acre. One ounce plants 200 feet of row; 3 to 4 pounds, an acre.

PEPPERS

SWEET and HOT

*the finest kind
for home and market*

For the Home or Market. Steadily becoming more popular. It is one of the most profitable truck crops in the South. An acre yields about 500 ½-bushel hampers, and a fair estimate of returns would be \$400.00 to \$800.00 per acre. Truckers favorably located should give this crop more serious consideration. Maturity dates specified are the number of days from setting of plants to picking marketable fruit.

Culture. A high temperature is required to germinate Pepper seed. Sow the seed early in hotbeds or in protected boxes, or delay planting until the ground has become well warmed. When plants have 6 to 8 leaves, and danger of frost is over, they may be transplanted to the open ground in rows 3 feet apart and 1½ to 2 feet between plants. Cultivate and keep free of weeds. One ounce will produce 1000 plants; 1 pound enough plants for an acre.

It is resistant to wilt, shows resistance to early blight and has shown greater vigor than any other variety in the trials at the Louisiana Experiment Station. The handsome fruits are medium to large in size and globe to deep globe in shape. The color is pink. The fruit itself shows a high degree of resistance to cracking. The interior is made up of numerous thick bracing walls. Both seed and cavities are very small. Pkt. 15c; ½ oz. 40c; oz. 75c; ¼ lb. \$2.25; lb. \$8.00; 5 lbs. \$37.50.

Earliana

No garden should be without its quota of Tomatoes. They require little care and yield heavily in a small space. No vegetable can be put to more uses, cooked or in salads, than Tomatoes. They are rich in vitamins, and valuable as an appetizing dish in many ways. Our Tomato seed is produced under the supervision of experienced and qualified seed-breeders; each individual type is rigidly selected and bred for earliness, productivity, and uniformity in size, shape, and color.

Maturity dates given are from the setting of plants to marketable fruits.

Culture. For early fruit, sow thinly in a hotbed or indoors in shallow boxes. Harden plants by exposing to the air occasionally. In about 6 weeks the plants will be ready to set out, provided danger of frost is over. The rows should be 4 to 5 feet apart and the plants about 3 feet apart in the row, or 2 feet in row if staked. Cultivate as long as the vines will permit.

Tomatoes are much improved in appearance and quality when trained to stakes. The usual method is to set one strong plant to a 5- or 6-foot stake, tying the plant up and pruning it quite freely as the vine advances in growth. One ounce will produce 1500 plants; 4 to 6 ounces will furnish sufficient plants for an acre.

We shall not be surprised to have you report that it will out-produce and out-sell any tomato you have ever grown. Prices: Garden pkt. (approx. 200 seeds) 50c; trade pkt. Sensational NEW Flowers

Tithonia Torch

CLEOME

1341 **Helen Campbell.** A tall, vigorous, light-stemmed type in pure white. Various colors of Cleomes have been offered in the past but none as true in habit as Helen Campbell. The pure white color and light green stems are distinct "breaks." A flower unsurpassed for delicate grace. Pkt. 25c.

LINARIA

1601 **Northern Lights.** Brilliant new colors characterize this new strain of the popular "Baby Snapdragon." Clear whites, bright yellows, vibrant blues and carmines combined with a liberal sprinkling of reds and bronzes with yellow lip make Northern Lights a great novelty. Plants grow 15 inches high, bushy but erect. Excellent if a colorful garden is desired. Pkt. 20c.

Zinnia Peppermint Stick

ZINNIA

2140 **Peppermint Stick.** Strictly speaking a novelty. It has been selected for a wide color range, including red and white, red and yellow, pink and white, orange and yellow, and purple and white, with a large percentage of the flowers being striped. One of the best Cut-and-Come-Again Zinnias; flowers will be produced until frost. Pkt. 15c.

TITHONIA

2065 **Torch.** Received the elusive All-America Flower Selection's Silver Medal for 1951. This Golden Flower of the Incas or sometimes called Mexican Sunflower, brings us a new bush form and luxuriant foliage plant to carry its numerous long-stemmed, fiery orange-scarlet flowers. This new flower blooms much earlier than all other Tithonia and grows naturally into a very symmetrical, attractive plant. May be sown directly in the garden as soon as the soil is warm. Pkt. 50c.

MARIGOLD

1731 **Glitters.** Received the All-America Flower Selection's Bronze Medal for 1951. This is truly one of the finest marigolds yet offered. It is large, fully double chrysanthemum-flowered, clear yellow. There is no doubt but that this tall and erect, bushy marigold will bring refreshing color to any garden. The attractive foliage is dark green, making a rich background for the yellow blooms. The outer petals are very much fringed. Growing not quite as tall as "Mammoth Mum," Glitters is earlier to bloom. It is delightful for cutting as well as a colorful garden attraction. Pkt. 50c.

MORNING GLORY

1747 **Darling.** Anyone slightly interested in Morning Glory will be more than enthused with this new giant flowering type. It is the most colorful of all Morning Glory showing a brilliant rose-cerise in startling bicolor contrast to a throat that's pure white. The flowers are of good size ranging up to four inches in diameter. This is truly one of the best flowers yet introduced. Pkt. 25c.

SWEET PEA

2144 **Doris.** This Sweet Pea is a Cuthbertson type of a distinct shade of deep, rose-cerise with scarlet shading. This color is probably the newest in this highly successful type of heat-resistant Sweet Pea. The vigorous vines produce an abundance of long strong stems each carrying four brilliant flowers. Pkt. 25c.

HIGHEST
GERMINATING
SEEDS

GRASSES

FOR LAWNS AND FARMS

Fancy BERMUDA Grass

829 The most dependable and permanent grass for lawns, golf-courses and athletic fields. Makes a tough, even clumpless turf that recovers quickly after cutting. Lasts for years; stands a long, hot, dry summer without injury. It is by far the most important pasture grass in the South. Succeeds on nearly all types of soil, even if poor and sandy. Loamy bottom lands well drained are best. As a grazing and fattening grass has few equals. It is palatable and relished by all live-stock. Close grazing improves its quality. On good soil will furnish two or more cuttings and frequently up to 5 tons of hay per acre. Grows well with Lespedeza and Dallis Grass, and follows winter growing clovers, such as White Dutch, Bur, Medic, Hop and Persian exceptionally well. Germinates in 20 to 30 days with proper soil moisture. Sow broadcast and cover very lightly, when ground is thoroughly warm and only on well-prepared land. Sow 12 to 15 pounds to the acre for pasture; 5 lbs. to 1,000 square feet for lawns. The seed is very small and to facilitate equal distribution may be mixed with dry soil to increase bulk. The grass spreads rapidly over the ground by means of its aggressive root system. The Bermuda Grass Seed we offer is the fine leaf cultivated turf-producing strain, testing 98% pure or better. Reuter always offers the best. Lb. 65c; 5 lbs. \$2.85. Not prepaid; 10 lbs. \$4.20; 100 lbs. \$38.00.

St. Augustine

Perennial grass for shady lawns in the lower South. It is a deep green, broad-bladed grass, creeping by means of surface runners, but lawns are established by rooted runners, laid down in parallel trenches about 8 to 10 inches apart. A bushel will plant 200 square feet. Write for free leaflet. Not prepaid; Bus. \$2.25; 10 bus. \$20.00. Available April to October.

Hulled BERMUDA Grass

826 Reuter offers his Extra Fancy Bermuda Grass with the hull removed, a new process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. In fact, it germinates almost as quickly as Rye Grass. It is the same grade as our famous Fancy Bermuda offered above with the almost watertight hulls removed, previously believed impossible. Furthermore, it is more economical, because only about half the quantity is necessary to sow a 100 square feet of lawn. It is

revolutionizing Bermuda lawn planting with its quick, positive results. Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 3 lbs. to each 1,000 (50x20) square feet of lawn, fairway, athletic or aviation field. Use 10 pounds per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify HULLED SEED when ordering, otherwise the unhulled seed will be shipped. Prices: Lb. 80c; 5 lbs. \$3.50. Not prepaid; 10 lbs. \$5.50; 100 lbs. \$50.00.

RESCUE

842 (Bromus Schraderi). Makes fine early spring pasture. Grows in tufts or bunches, often a foot in diameter and is very leafy at the base. The stems are nearly erect. 2 to 4 feet high. Furnishes nutritious grazing until May. Does well mixed with Rye Grass and Bur Clover at the rate of 30 to 40 lbs. per acre. Lb. 60c; 5 lbs. \$2.45. Not prepaid; 10 lbs. \$3.60; 100 lbs. \$33.00.

American RYE Grass

840 An annual, tall, broad, flat-leaved deep green grass very valuable for winter lawns and pastures. Produces within 3 weeks, or less, a beautiful green winter lawn. It is one of the most important and valuable winter pasture grasses for the entire South. Grows from 2 to 3 feet high. Withstands severe winters perfectly. On mellow soils no preparation is needed—simply sow seed and lightly cover. Requires 10 pounds per 1,000 square feet for lawns; 25 to 30 pounds per acre when used alone for pasture. Spring sowings are conducted during January and February. Reuter offers seed of the highest quality. Lb. 35c; 5 lbs. \$1.30. Not prepaid; 10 lbs. \$1.60; 100 lbs. \$12.75.

FLAWNSEED

828 Zoysia Japonica. This fine-leaved lawn grass will thrive well both in full sun and dense shade. As it only grows from 3 to 4 inches tall it requires very little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to Chinch Bugs and has a tendency to crowd out Crab Grass. Full directions for planting with each purchase. Lb. \$5.25; 5 lb. bag \$25.00, postpaid.

RHODES GRASS

844 A valuable pasture and hay grass for South Texas. Yields 6 to 8 cuttings of rich hay, each averaging 1 to 1½ tons per acre. Does not stand severe freezing. Thrives best on soils that are fairly moist. It is very leafy, slender and erect, producing stems from 2 to 5 feet in height. The hay is easily cured. Broadcast seed anytime during the early spring on well prepared land at the rate of 12 lbs. per acre. Cultural leaflet free! Lb. \$1.75; 5 lbs. \$7.50. Not prepaid; 10 lbs. \$13.00; 100 lbs. \$120.00.

Kentucky BLUE GRASS

836 Excellent lawn grass; ideal for golf fairways and putting-greens; the sweetest and best pasture grass. Plants slightly creeping with deep green narrow leaf blades. It is only adapted to parts of the upper South and Northward. 5 pounds will sow 1,000 square feet for lawns; 40 pounds per acre for pasture. Plant in the fall and early spring. Lb. \$1.00; 5 lbs. \$4.50. Not prepaid; 10 lbs. \$7.50; 100 lbs. \$70.00.

ALTA FESCUE

822 Alta Fescue has great promise of being the greatest all year round pasture, hay and silo grass for the South. It is a perennial grass attaining a height of from 2½ to 3 feet. Grows practically the year round in favorable seasons. The growth may be somewhat slow the first year while an extensive root system is being developed, but should be rapid and vigorous after that time. Alta Fescue is adapted to nearly all soils in the South that will retain the needed moisture and is particularly tolerant to wet and even over-flowing land.

The seeds may be sown in February and March. Sow at the rate of 10 to 15 lbs. of seeds per acre. Lb. 95c; 5 lbs. \$4.50. Not prepaid: 10 lbs. \$7.00; 100 lbs. \$65.00.

Kentucky 31 Fescue

823 Kentucky 31 is a perennial bunch grass. The bunches increase in size and it eventually makes a close tight sod. It puts up blades in great numbers. It is best suited for use as a permanent pasture grass since it builds up a heavy dense sod that prevents erosion, and holds up livestock in wet, muddy weather, and produces large amounts of succulent pasture the year around. It will grow almost anywhere but the better the soil, the better the grass. It is particularly suited to wet ground and will survive water standing on it for weeks at a time. It also grows well on high ground and stands drought well. Plant 10 to 20 pounds to the acre depending on whether a dense sod is desired or not. Lb. \$1.00; 5 lbs. \$4.75. Not prepaid: 10 lbs. \$7.50; 100 lbs. \$70.00.

PANIC GRASS

845 Giant Blue Panicum is a new marvel among pasture grasses. It is rich in protein and food value. Panic Grass is a perennial bunch grass. It doesn't make much growth for the first several months during which time it is building a root system. After it gets the roots well established it grows amazingly fast and is resistant to drought. Seed should be planted in moist soil and covered lightly using only 1 pound per acre. It may be advisable to mix the fine seed with some dry sand in order to be able to sow the seeds evenly. Rolling after planting the seed will often improve the germination and give a better stand. ¼ lb. 50c; lb. \$1.60; 5 lbs. \$7.50. Not prepaid: 10 lbs. \$13.00; 100 lbs. \$125.00.

CARPET GRASS

830 Carpet Grass is one of the most important and valuable permanent grazing grasses for the South. A perennial spreading by creeping stems which root at every joint, thus forming a close, compact turf. Compared with Bermuda Grass, Carpet Grass is its equal in feeding value; it may be grazed considerably later in the fall and earlier in the spring; it does better on poor, sandy soils and furnishes more grazing; it is better adapted to wet sour soils and thrives better under hot, humid conditions. Like Bermuda, it is palatable and relished by all livestock.

It is strictly a pasture or lawn grass and stands close grazing and heavy trampling; in fact, it grows best and spreads more rapidly when closely grazed and trampling seems to improve it. Can be sown over your present pasture, creek bottom, or cut-over woodland without plowing or discing. Produces practically year-round succulent green pasture. Easily eradicated by plowing. It does splendidly sown with Lespedeza, Dallis Grass, Black Medic, White Clover and Bur Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. It is a drought-resisting grass and furnishes fine grazing during long dry spells, when all other grasses are dead. Carpet Grass is easy to start, if you plant first quality seed. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks and golf courses. Lb. 55c; 5 lbs. \$2.40. Not prepaid: 10 lbs. \$3.30; 100 lbs. \$30.00.

Dallis Grass

834 (*Paspalum Dilatatum*.) One of the most valuable permanent pasture grasses in the South. Comes nearer growing year-round than any other grass. Cultivation readily kills it. Makes its fastest growth on heavy or moist bottom-land, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought remarkably well. We know of no better grass to withstand flood conditions on lowlands. Light freezes do not injure this grass.

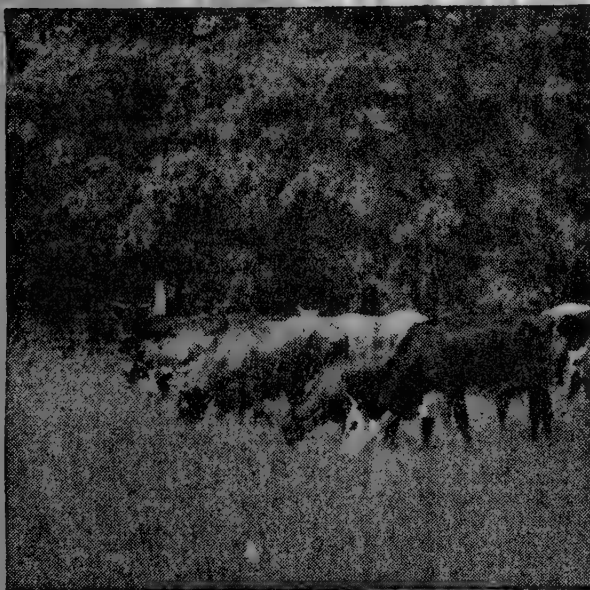

Dallis Grass grows well with Lespedeza, also White Dutch, Alsike, Hop, Bur, Black Medic and Persian Clover. Plantings are made the year-round, but principally in late summer and early fall, and in the spring commencing in January. Broadcast 10 to 15 lbs. per acre if sown alone.

834 Imported Seed. (50% or better pure live seed.) Lb. \$1.10; 5 lbs. \$5.25. Not prepaid: 10 lbs. \$8.25; 100 lbs. \$77.50.

BAHIA GRASS

PENSACOLA

843 This grass for grazing is as good as any of the improved grasses if grazed while young or kept heavily grazed. It stands more cold weather and more dry weather than any of the other Summer grasses. Hot weather, cold weather, dry weather, rich land, eroded land, clay or sand—Pensacola Bahia will thrive and grow. Relatively unknown 5 years ago, it is fast becoming one of the South's leading grasses. Pensacola Bahia is a narrow leaf Bahia Grass (*paspalum notatum*) that has a heavy, deep, fibrous root system. It has been grown successfully in combination with Clover, Lespedeza and Fescue Grass. Plant at the rate of 10 to 20 lbs. per acre. Lb. 95c; 5 lbs. \$4.50. Not prepaid: 10 lbs. \$7.00; 100 lbs. \$65.00.

Cattle on Pensacola Bahia Pasture

COMMON

835 An excellent pasture grass for the lower South. Bahia is a deep rooted, perennial grass forming a dense turf of leaves. The plants spread slowly by short, stout stolons and range in height up to 30 inches. Once well established Bahia will stand temperature of 12 above zero. It is widely adapted, growing on both high and low soils and will grow on drier land than other pasture grasses because of its deep root system. Sow the seed ¼ to 1 inch deep at the rate of 10 to 20 pounds per acre. You should try this grass. Lb. 50c; 5 lbs. \$2.10. Not prepaid: 10 lbs. \$2.80; 100 lbs. \$25.00.

SUDAN GRASSES

FOR PASTURE AND HAY

SWEET SUDAN →

824 Developed by the Texas Agricultural Experiment Station in co-operation with the Bureau of Plant Industry, U. S. Department of Agriculture. It is sweet, juicy and more palatable to livestock than the Common Sudan, and even after the crop reaches maturity the stalks and stems are relished by cattle. Sweet Sudan has more and broader leaves, heavier and taller stalks and stools much heavier than the Common variety. It is later in maturity than the Common Sudan, thereby producing more vegetative growth and remaining green and growing longer than the Common. More grazing can, therefore, be expected. When planted side-by-side with Common Sudan, the cattle kept the Sweet Sudan grazed to the ground, while the Common Sudan was grazed to the height of one foot. In all cases the Sweet Sudan was eaten first. Its resistance to leaf-disease and its non-shattering seed qualities make it far superior to the old type. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.45. Not prepaid: 10 lbs. \$1.75; 100 lbs. \$14.50.

MILLETS

GOLDEN

853 Makes quick, easily cured, large-yielding, and nutritious hay-crop. Relished by horses and cattle. Ready in 6 to 8 weeks, and should be cut when coming into flower. Seed thickly, not less than 50 pounds to the acre, any time from April until the end of July. We offer genuine Tennessee-grown seed. Lb. 35c; 2 lbs. 55c; 5 lbs. \$1.10. Not prepaid: 10 lbs. \$1.25; 100 lbs. \$9.50.

PEARL OF CATTAIL

855 One of the most nutritious of the green forage plants. Grows 10 to 12 feet high, but cutting can commence when 3 to 4 feet high. Can be cut 3 or 4 times in a season. Does well on poor land. All stock eat it greedily and thrive on it. No plant will go further toward solving the forage problem in the South. Should not be planted until the ground is thoroughly warm. Plant until August in 3-foot rows, using 5 pounds of seed, or 20 pounds broadcast, to the acre. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.45. Not prepaid: 10 lbs. \$1.75; 100 lbs. \$14.50.

COMMON SUDAN

825 This valuable quick-growing, heavy-producing grass should be grown on every farm in the South. Yields from 4 to 10 tons of cured hay per acre. The hay is relished by cattle, horses, and sheep. Stools out wonderfully after the first cutting. An excellent catch-crop, requiring only 45 days before the first cutting. It stands more hot, dry weather than any other pasture, and can be cut as often as four times a season. Cut for hay when in bloom. May be grown with cowpeas and soy beans. When ground becomes warm sow 5 to 6 pounds to the acre in rows; 20 to 25 pounds broadcast. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.40. Not prepaid: 10 lbs. \$1.70; 100 lbs. \$14.00.

JOHNSON GRASS

827 Recognized as one of our most valuable hay and forage plants, although considered a pest in many parts of the South. No other grass makes such enormous yields of hay—3 to 4 cuttings a season—and the hay compares favorably with timothy and alfalfa. It should be cut or mowed just when the seed-heads begin to form. There is always a great demand for Johnson Grass hay, as it is relished by all stock, especially horses. In places, where it can be controlled there is no other perennial grass that makes as good yields of hay. Resists drought remarkably well. Sow 40 pounds to the acre from early spring until early fall to give you a permanent summer pasture and a hay-crop forever. Mixtures of Johnson Grass and other crops, such as oats and cowpeas, also make a good quality of hay. Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.60. Not prepaid: 10 lbs. \$1.90; 100 lbs. \$16.00.

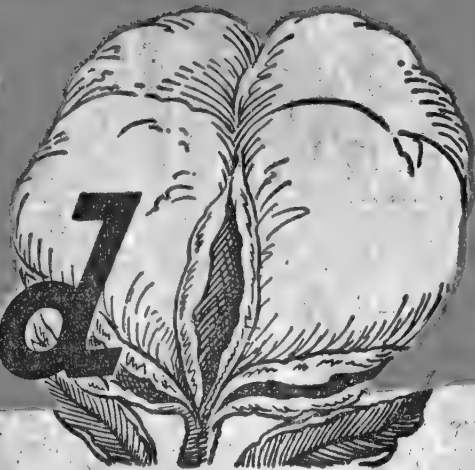

TEOSINTE

913 A giant forage plant. The yield is truly enormous and 50 tons of green forage per acre is not unusual. Grows 8 to 12 ft. high, sending up from 20 to 50 stalks from a single root. If harvested when 4 to 5 ft. high, 2 or 3 cuttings may be obtained in a single season. Plant during April and May in drills 3 1/4 to 4 feet apart; 2 to 3 pounds plants an acre. Oz. packet 15c; 1/4 lb. 50c; lb. \$1.50; 2 lbs. \$2.75; 5 lbs. \$6.50. Write for current quantity prices.

BENE

914 One of the finest crops for poultry feed and highly recommended for planting to attract quail and partridges. It's a hardy, tall, annual herb growing 4 to 7 ft. high, producing flowers followed by seed pods which scatter oily seeds in great profusion. Frequently planted to bait dove fields. Plant in rows out in the woods and also in cotton and cornfields at the last cultivation at the rate of 5 lbs. per acre. We offer the tall growing variety. 1/4 lb. 25c; lb. 70c; 2 lbs. \$1.20; 5 lbs. \$2.60. Not prepaid: 10 lbs. \$3.50; 100 lbs. \$32.00.

Certified DELTA PINELAND No. 15 Cotton Seed

AVAILABLE THIS YEAR IN:
MISSISSIPPI STATE CERTIFIED BLUE-TAG SEED
CERTIFIED CHEMICALLY DELINTED

DELTAPINE 15

Reuter is offering the newest strain of Deltapine Cotton, Deltapine 15. Deltapine 15 is very productive and has a high lint percentage, or gin turnout, which has always distinguished the Deltapine variety. Whereas the length of the staple is the same as the older Deltapines the new strain (15) has somewhat greater length uniformity. It also has stronger fiber; these two qualities account for the fact that 15 has definitely better spinning quality than any of the previous Deltapines.

The cotton industry has now reached the stage in which manufacturers are informing themselves on the adaptability of different cottons for their particular purposes. Not only must a cotton yield well, but it must consistently pick out in relatively good grades and, when spun into yarn must have good strength and good appearance. The great improvement in Deltapine Cotton has been attained without a corresponding loss in yield per acre.

Mississippi State Certified Blue-Tag Cotton Seed. Not prepaid: 30 lbs. (bu.) \$4.50; 100 lbs. (3 $\frac{1}{2}$ bus.) \$14.25; 300 lbs. (10 bus.) \$42.00.

Certified Chemically Delinted. Not prepaid: 50 lbs. \$10.25; 100 lbs. or more \$20.00 per 100 lbs.

"SINKERS"—ACID DELINTED COTTON

Important! This year all indications are that there will be considerable quantities of certified seeds with sub-standard germination sold at unusually high prices, and planted heavier to compensate for this low germination. This situation will be costly to you both from the standpoint of excessive seed costs and thinning.

Sinkers will maintain its unusually high quality (90% germination), and it will be not only the finest seed but will cost less per acre to plant. Sinkers Deltapine 15 Cotton Seed is acid delinted and triple graded—this means that pound for pound it will plant far more acreage than mechanically delinted. Truly a quality seed of the highest.

Not Prepaid: 50 lbs. or more 27c per lb.; Orders for 500 lbs. or more shipped prepaid.

If you plant your own Cotton Seed treat it with 2% Ceresan. Will increase yield. 1 lb. treats 5 to 8 bushels. 1 $\frac{1}{2}$ lb. \$1.65; 4 $\frac{1}{2}$ lb. \$3.80, postpaid. Not prepaid: 25 lbs., \$20.15.

CERTIFIED SWEET POTATO PLANTS

Every one of Reuter's Sweet Potato Plants is strong and free from disease. They are State Certified to give you double assurance of good clean stock. Produce a good crop even on poor lands. Plant in rows 3 $\frac{1}{2}$ to 4 feet apart and 12 to 15 inches apart in row. Cultivate only when needed to keep down weeds. Requires about 8,000 plants to an acre. Shipments commence about April 1 and continue until July 1, weather conditions permitting. Shipped direct from our own grower's station to you.

Ears are very long, large and heavy, with 14 to 16 rows of kernels. Grain is white and hard, but not flinty. Cobs are small and the shelling percentage is high. Its immense stalks make good fodder. SWEET CLOVER

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. Makes a large growth the first year, but a much heavier growth the second due to its extensive root system. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Should be in all pasture mixtures. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during spring and early fall at the rate of 15 to 20 pounds per acre, if sown alone. Seed should be inoculated for best results with NITRAGIN. Lb. 50c; 5 lbs. \$2.00. Not prepaid: 10 lbs. \$2.80; 100 lbs. \$25.00.

MELILOTUS INDICA

738 Annual Yellow Blossom Sweet Clover. Also spoken of as "Sour Clover." A valuable winter legume for the lower South. Grows 2 to 3 feet tall and produces 5 to 10 tons of green matter by early May. Will reseed itself if cut when seeds start maturing. It thrives on all kinds of soil and grows rapidly and abundantly. Sow during the early fall or spring at the rate of 20 pounds per acre if used alone. Inoculate seed for best results with NITRAGIN. Lb. 35c; 5 lbs. \$1.35. Not prepaid: 10 lbs. \$1.55; 100 lbs. \$12.50.

ALYCE CLOVER

727 This revolutionizing new clover should be on every farm in the South. Like Lespedeza it is a summer annual reseeding each fall and volunteering the next summer, but grows twice as tall and furnishes much more hay or pasture of finer quality feeding value and palatability. When cut early for hay a second growth will produce a seed crop, 350 to 600 pounds per acre. Cut hay in early bloom and rake as soon as drying permits. It dries readily and can be baled the day following harvesting. Grows well in shade of wooded pastures or orchards. Has more root nodules than Crotalaria and is 50% better for soil improvement. Does well in acid soil if not too wet. Resistant to insects, diseases, heat and drought. Makes 2-4 tons hay per acre. Seeded on Bermuda, Dallis, Carpet or other grass sods it furnishes nitrogen that is lacking in Southern soils, and doubles the growth of grass. It has 4 times more calcium, twice as much phosphorus and 2½ times as much protein as Carpet Grass. When cows graze on it their milk flow increases. Plant during spring and early summer at the rate of 10-12 lbs. per acre broadcast. Inoculate seed with NITRAGIN E. Write for free cultural leaflet. Lb. 45c; 5 lbs. \$1.70. Not prepaid: 10 lbs. \$2.25; 100 lbs. \$19.50.

White Dutch CLOVER

734 White Dutch Clover is the only plant that furnishes abundant grazing throughout the year under severe Southern conditions. The hottest dry summers do not stop its steady and sure growth. It has no equal for winter and early spring grazing. It is not easy to tramp out, and it restricts soil-washing and adds fertility. It is relished by all livestock. It is adapted in the South to practically every region and type of soil. It is a perennial. White Dutch Clover does well with Bermuda and Dallis Grass, as well as with Kentucky Blue Grass and Red Top in the upper South.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN. ¼ lb. 45c; lb. \$1.50; 5 lbs. \$6.50. Not prepaid: 10 lbs. \$11.00; 100 lbs. \$100.00.

743A Marvelous Mixture. A combination of three of our most famous pasture clovers for the South—Persian, White Dutch and yellow Hop. A seeding that will last for years. Produces fine quality and variety of most excellent feed and gives longer pasture season. It only requires 6 pounds of seed to the acre. Lb. \$1.00; 5 lbs. \$4.50. Not prepaid: 10 lbs. \$7.50; 100 lbs. \$70.00.

ALSIKE CLOVER

736 On the borders of marshes, seepy hillsides, and places too wet for other Clovers this plant makes its best growth. It is of no value on dry soils. Sow with Red-Top grass. Sow during fall and spring, at the rate of 6 to 8 pounds per acre. Inoculate seed with NITRAGIN. Lb. 85c; 5 lbs. \$3.75. Not prepaid: 10 lbs. \$5.70; 100 lbs. \$52.00.

RED CLOVER

737 Better known in the Northern part of the Cotton Belt, but thrives very well in the lower regions. Recommended chiefly as a winter and spring pasture Clover and soil improver on meadows. Some use it for hay, and yields 1 to 2 cuttings. Most soils, except strongly acid types, suit this great soil-improving clover. Commence sowing during the early fall and spring at the rate of 12 to 15 lbs. per acre. When planted in pasture mixtures with other crops, 5 lbs. per acre is sufficient. Inoculate seed with NITRAGIN. Prices: Lb. 80c; 5 lbs. \$3.50. Not prepaid: 10 lbs. \$5.50; 100 lbs. \$50.00.

LESPEDeza

The Wonder Crop

Unequaled for hay, pasture, and soil-building. Adapted to a wider area than any other known legume. Withstands droughts that would kill other crops. Increases the grazing capacity of pastures from twenty-five to fifty percent. Grows anywhere—on acid soils, waste lands, worn-out gravelly soils and galled hillsides where nothing else of value will grow. Reseeds itself every year, even when severely grazed, but is easily killed out by a cultivated crop. Does well in mixtures in all Southern pasture grasses.

Inoculate All Lespedeza with Nitragin "L"

For a better stand and maximum yield, inoculate your seeds with Nitragin before planting. The procedure is simple and inexpensive. Full directions on each can. 100 lb. size can 50c postpaid.

Sericea Lespedeza

731 (Perennial). A wonderful, new drought-resistant, permanent legume. Thrives on poor land and acid or sour land, as well as rich soil. Its root system reaches 1 to 3 feet in the soil for nourishment, and even in the driest weather will continue to grow and flourish. Makes slow growth on poor soil the first year, but when once established, it produces an abundance of nutritious forage that is relished by all livestock. The second-year growth each plant puts out 20 to 30 stalks from 5 to 6 feet tall, producing a better quality hay in succeeding years and gives three cuttings per season. Produces as high as 3 to 4 tons of dry hay equal to alfalfa in feeding value. The roots survive the coldest winters. May be closely grazed. A heavy yielder of seed. Reuter offers you only re-cleaned, hulled and scarified seed. If a seed crop is wanted, sow 4 to 5 pounds per acre in 3-ft. rows on well-prepared seed bed from February until July, the earlier the better. For hay broadcast 15 to 20 pounds per acre. Cover seed very lightly. Cultural leaflet free. Seed should be inoculated. See above. Lb. 55c; 5 lbs. \$2.50. For larger quantities, see price-list in back of catalog.

COMMON

733 The most widely-grown variety. Does well over a wider territory than other varieties. The most important pasture legume in the South. Increases carrying capacity of pasture lands from 25 to 50%. Grows on poor soils, including acid types, and supplies grazing during the summer and fall months when most pasture plants are suffering from hot sun. On good soil will produce an excellent growth, and reaches a height of from 18 to 30 inches. The small stems of the plant make it an easily cured hay crop. Seed should be planted on a well-prepared but firm seed bed in February or March. On grazing crops sow 10 to 15 pounds per acre. When planted alone for hay crop sow 25 lbs. Lb. 75c; 5 lbs. \$3.50. For larger quantities, see price list in back of catalog.

KOREAN

732 The earliest of the annual Lespedezas. The abundant growth, deep penetrating roots covered with nodules makes Korean Lespedeza an outstanding grazing and soil-building legume. It makes larger growth than the Common, 15 to 24 inches, single plants having a spread of 3 feet; has larger leaves, furnishes pasturage three weeks earlier. It is highly resistant to drought, and thrives on poor, worn-out soils where alfalfa and clovers fail.

Holds its leaves well and produces a full crop the first season. It is an annual, reseeds indefinitely although closely grazed. It is highly recommended for the upper South where the seasons are shorter and the sun less severe. Korean is especially good for sections with short growing seasons, because it matures its seed crop earlier than the others. It produces on all soil types where the common varieties grow, but in producing Korean for hay, fertile soil will give much greater return. If Korean is used in permanent pasture mixtures, the seed may be planted with other grasses and clovers in the spring, using from 5 to 10 pounds of seed per acre. When sown alone broadcast 25 lbs. to the acre. February and March are the best months to plant. Korean Lespedeza Clover Seed is in short supply and higher prices are expected. Lb. 30c; 5 lbs. \$1.15. For larger quantities, see price-list in back of catalog.

KOBE

730 Makes the greatest growth and thrives over the entire South. It is of spreading growth, but stands up well when the stand is thick. It produces an abundance of seed which are larger than the Common. It is more drought-resistant than the Common, being deeper rooted and starts growth earlier. Recommended for the main cotton belt, or from southern Arkansas, Tennessee and coastal North Carolina south. It greatly outyields the Common for hay and pasture in this territory with the same range of distribution. If it is to be used for hay and sown alone, sow 30 to 35 pounds of seed. On permanent pasture lands where Kobe Lespedeza is to be one of the legumes in the planting mixture, sow 10 to 12 pounds to acre. Kobe makes an abundant all-summer and fall pasture. For soil improvement Kobe should be better appreciated. Its large root system, heavy foliage growth and adaptation to poor, alkaline soils, makes it very desirable as a soil-builder. Lb. 40c; 5 lbs. \$1.75. For larger quantities, see price-list in back of catalog.

Crotalaria

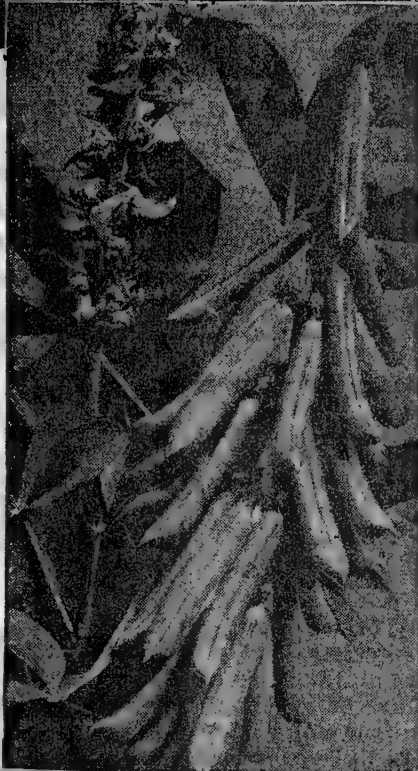

OUR CROTALARIA SEED IS SCARIFIED

Reuter's Crotalaria seed is hand-picked, machine cleaned and cured in the most approved manner. Our reputation stands back of every bag we sell and the seed will represent the very best this season has produced. In recent test plantings, properly cured and scarified seed produced eight times as many plants per square yard as compared to ordinary field-run, non-scarified seed.

885-A Spectabilis, Early Strain.

A new early strain in every way equal to the common variety, but matures three weeks earlier and more dwarf in growth. Makes nearly as heavy a tonnage. Can be sown from March until July. More desirable for planting in fruit and pecan orchards and will mature seed and can be plowed under before the nuts fall. Customers in upper South should plant this type. Lb. 50c; 5 lbs. \$2.00. For larger quantities, see price-list in back of catalog.

INOCULATE YOUR
CROTALARIA WITH
Nitragin "E"; 2 bu. size, 35c

885 Spectabilis, Late. A remarkable new summer cover crop and soil builder yielding 40,000 pounds of green weight per acre. The humus produced by such yield is of tremendous value. When turned under is the equivalent of 800 pounds of Nitrate of Soda. It is not recommended for hay. Requires no fertilization, no liming, no inoculations. Reseeds itself under favorable conditions. Broadcast just before the last cultivation of cotton or corn. It will just about double the crop yields following it. Thrives on any soil. Broadcast 10 to 15 pounds on well-prepared land from March through June, harrowing in not over 2 inches, while the soil is moist. Lb. 50c; 5 lbs. \$2.00. For larger quantities, see price-list in back of catalog.

885-B Intermedia. The only Crotalaria that is relished by live-stock. Furnishes several cuttings of hay. The long, thin leaves are of fine quality. It's two weeks earlier than the Spectabilis. Grows much the same as the other two types described above. It is adapted to sandy loam soils, but does well on high ground. It requires about 3 to 5 pounds to sow an acre planted in rows 3 to 3½ feet apart, 8 to 10 pounds broadcast. Seed should be planted 1½ to 2 inches deep as soon as danger of frost is past. Cultivate the same as corn. Makes a splendid cover crop to plow under. Lb. 60c; 5 lbs. \$2.50. For larger quantities, see price-list in back of catalog.

SESBANIA

884 Macrocarpa. A great

summer growing fertilizer crop. Loosens and emulsifies the soil. Citrus growers in the Imperial and Rio Grande Valley have found it superior to all other fertilizer crops, making more tonnage, quicker growth and shading the young trees during hot weather. Florida citrus growers are commencing to plant it liberally. Trucker growers are planting it in a bigger way. It requires from 8 to 10 weeks from time of germination to time of plowing under. It should be plowed under when the seed is in the dough. Attains a height of from 8 to 10 feet. Individual plants will make a limb spread of from 4 to 6 feet. The foliage is like an Acacia, with finely cut small leaves. They decay very rapidly. The root growth is very rapid, as much as 3 feet from tip to tip, and 18 inches deep in eight weeks. They are entirely covered with nodules. It has no known value other than as a fertilizer crop, or for game preserves. Quail are very fond of the seed, which are produced in abundance, and are capable of lying on the ground a long while, and remaining in good condition. Citrus growers usually drill 30 lbs. of seed to the acre, between the trees. Trucker growers should sow 40 lbs. per acre and give a light covering. Cotton and corn farmers have found Sesbania the solution of keeping up their soils, sowing at the rate of 12 to 20 lbs. per acre. For the period of growth, we know of no legume which is equal as a producer of nitrogen and humus. Cultivation readily kills it. Plant only scarified seed that germinates readily. Lb. 40c; 5 lbs. \$1.50. Not prepaid; 10 lbs. \$1.95; 100 lbs. \$18.50.

MUNG BEANS

710 The roots are crowded with nitrogen gathering nodules and it is truly a great crop to turn under for building up your soil. For hay, plants grow erect and bushy not lodging except on rich bottom land. Grows 3 to 5 feet high, easily cut and cured—stock eat it clean with less waste than peavine hay. Yields run from 500 to 1,000 pounds per acre. Mung Beans do well on sandy to heavy clay soil that will grow any kind of grain crop. Plant 3 to 5 pounds per acre in 3½-foot rows. Broadcast 10 to 15 pounds per acre. Matures in 90 to 120 days. ¼ lb. 15c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.60. Not prepaid; 10 lbs. \$1.80; 100 lbs. \$15.00.

BROOM CORN

723 Scarbrough Dwarf. This type has less seed on it, and is on the upper one-third of the brush, allowing cleaner threshing. Makes the finest parlor brooms. Plant 4 to 6 seeds in hills 30 to 36 inches apart, rows 40 inches apart. Requires 4 to 5 lbs. to plant an acre. ¼ lb. 25c; lb. 60c; 5 lbs. \$2.50.

723A Standard Evergreen. Grows 7 to 12 feet tall, and the brushes are usually from 12 to 24 inches long. The brush should be harvested when the natural green color extends from the top of the fiber to the base of the head. ¼ lb. 25c; lb. 60c; 5 lbs. \$2.50. For larger quantities, see price-list in back of catalog.

CANE SEED

HEGARI

These Sorghums can be planted either alone or mixed with cowpeas and soy beans. Plant in 3½- to 4-foot drills, using 8 to 10 pounds per acre, or broadcast 50 to 75 pounds for forage. If sown broadcast with peas, use 25 pounds with 1 bushel of peas. Our seed is remarkably clean and of exceptional quality.

901 Improved Black Amber. Far superior in growth and yielding qualities to the original early Amber Sorghum. Not good for syrup, but fine for early green feed and silage. If planted early it will yield two cuttings a season. If grown with cowpeas or soy beans the quality of the hay is improved and a more balanced ration may be had. Grows 10 to 12 feet. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities, see price-list in back of catalog.

899 Early Orange. Stalks taller and heavier than the Amber, but matures later. Yields immense crops for fodder. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities, see price-list in back of catalog.

902 Red-Top or Sumac. The great hay-cane or sweet Sorghum crop for the Southwest. Its slender stalks and abundant leaves make it desirable for hay. Resists drought. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities, see price-list in back of catalog.

905 CERTIFIED.

Yields 10 to 12 tons of green forage per acre. Leaves are broad, long and numerous. The uniform and upright seed heads of white grains do not shatter. The fodder is relished by all livestock because the stalks are very sweet and juicy. Grows 4 to 5 feet high. Matures in 85 to 110 days. Close spacing of 2 to 4 inches apart in the row is recommended for forage. Sow 8 to 10 lbs. per acre. Also sown broadcast for hay at the rate of 40 to 50 lbs. per acre. Stands dry weather well. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

904 Hegari. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

SAGRAIN

903 Certified. Produces 8 to 15 tons of silage or if left to ripen will produce 40 to 50 bushels of grain and 4 to 8 tons of cured hay per acre. Relished by all livestock. Grows quickly—matures in 10 to 12 weeks. A safer feed crop than corn and withstands neglect and adverse conditions. Splendid combination with Soy Beans.

Plant in 3½ ft. rows, 8 to 10 seeds per hill every 12 inches. Cultivate a couple of times and thin out 4 to 5 stalks per hill. We do not recommend broadcast planting. Can be best harvested with a corn binder, shocked like oats until cured. Plant 10 lbs. per acre. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities, see price-list in back of catalog.

895 (Egyptian Wheat.) Grows tall and produces 3 to 6 stalks from a single root. When grown for grain, the tops are cut, cured, and threshed like other grains. The grain is of high feeding value. Sow 8 to 10 pounds in drills 3 feet apart, or broadcast 25 pounds per acre. Matures in 120 to 140 days. It is the cheapest and best chicken-feed. **Pkt. 10c; lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities, see price-list in back of catalog.

891 (Black Hull.) Very stocky and leafy; valuable for forage and grain. Drill seed thinly, like sorghum, or sow broadcast. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

Reuter's SORGHUM FOR SYRUP

897 Sugar Drip Sorghum. Highly prized syrup-cane. Grows 9 to 10 feet high and has a very large percent of saccharine in the stalk. Under normal conditions yields 200 gallons of syrup of excellent flavor and beautiful amber color per acre. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities see price-list in back of catalog.

FETERITA

894 (Spr.) A distinct dwarf variety. Matures earlier and produces heavier yields than Kafir corn or Milo. Valuable for forage and fodder. It is a good crop to plant after oats or wheat because it is quick-maturing and its grain-feed value is nearly as high as corn. For hog-feed, cut grain-heads in the "dough." Soil should be prepared early for planting Feterita. Sow in 3-foot rows, 6 to 8 pounds per acre. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

896 Fine grain-crop or substitute for corn. Grows 4 feet high and has large grain-heads. It is quick to mature and may be planted late in the season as a "catch-crop." The compact stalk makes harvesting much easier. Resistant to drought. Plant in 3-foot rows at the rate of 6 to 8 pounds to the acre. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

Plant PLENTY of FEED CROPS

Grow Peanuts

Peanuts are a profitable "cash" crop. Easily grown on any soil. In addition to the nuts, the hay is superior to alfalfa as it contains more fats and is equal in protein. An excellent soil-improver. Shell the seed before planting, but where there is sufficient moisture this practice is not necessary. If planted in corn, 90 pounds will plant 4 acres; planted alone, 30 to 40 pounds in 2½- to 3-foot rows, dropping seed in hills 8 to 10 inches apart. Cover 1 to 2 inches deep. Cultivate thoroughly until nuts begin to form.

864 Spanish An early, heavy bearer; bushes grow close; are easily cultivated and gathered. Nuts medium size and sweet. Lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$2.35; 100 lbs. \$20.50.

Better Crops

CHUFAS

815 The Chufa is a species of ground-nut, most easily grown. Any land suitable for corn, cotton, or peanuts will make a bumper crop of Chufas. Plant from April until the end of June, in 2½- to 3-foot rows, dropping 3 to 5 Chufas together, 16 to 18 inches apart in the row, and cover 2 inches deep. In the fall pull up a few plants for your stock to taste, and they will then go over the entire field and will attend to the harvesting. Requires 1 to 1½ pecks to plant an acre. The crop is usually matured about September 15, and can be left in the ground until time to turn the hogs in. ¼ lb. 15c; lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$2.30; 100 lbs. \$20.00.

ARTICHOKE

816 Jerusalem or Ground. Every hog-raiser should grow Artichokes, for they come year after year, and keep the hogs in fine condition. You grow them just as you would potatoes: Cut them two eyes to the piece and plant 2 inches deep, 15 to 18 inches apart in 3- to 3½-foot rows. In the fall when they have matured, turn the hogs into the field, and they will feed on them all winter except when the ground is wet or frozen. They are more productive than potatoes. Yields of 700 bushels have been grown on an acre of good land, but 300 to 400 bushels is nearer the average crop. Although grown principally for hogs, they are fine food for cattle, sheep and horses. Also make an excellent table dish when served hot or chilled. Requires about 250 pounds to plant an acre. Plant during March or April, the earlier the better; they stand considerable drought and extreme cold weather. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.50. Write for quantity prices.

UPLAND RICE

881 Any ground having a reasonable amount of moisture can produce a good crop of Upland Rice. Drill 25 lbs. per acre in rows 2½ feet apart and cultivate. Will make 20 to 40 bushels per acre. Should be planted in March or April for best results. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.50. Write for quantity prices when ready to buy.

JAPANESE BUCKWHEAT

728 Splendid soil-improver, good summer cover-crop for orchards, and an excellent late summer catch-crop. A great poultry-feed, and bees fed on buckwheat blooms produce more honey. Buckwheat flour makes the most delicious cakes. Sow 40 to 50 lbs. to acre, either broadcast or in drills. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.15. Not prepaid: 10 lbs. \$1.30; 100 lbs. \$10.00.

RUSSIAN SUNFLOWER

912 Easily grown, an immense yielder, and as an egg-producing poultry-feed it has no equal. The leaves make good fodder; the whole plant makes fine ensilage and hog-feed. Recleaned COWPEAS

Cowpeas are the South's greatest soil-improving and hay-crop. Pound for pound, Cowpea hay is as valuable as clover hay. Nearly equals in value alfalfa and wheat-bran. Contains four times as much digestible protein as timothy hay. Makes a fine feed for work- and beef-stock and dairy cattle. Adds nitrogen to the soil and improves its

mechanical condition. There is no cheaper way to improve land than by growing Cowpeas.

Cowpeas can be planted any time from April until August, broadcast or in drills 3 to 4 feet apart. Cultivate two or three times. Broadcast, 1 to 2 bushels are required per acre, and 2 to 3 pecks for seeding in drills. Inoculate your seed for best results.

VELVET BEANS

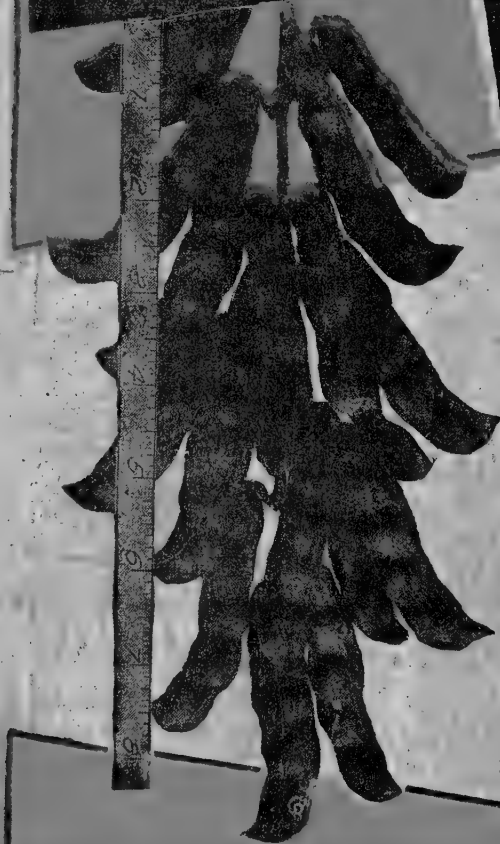

Make an enormous growth and as a soil-improver they are considered superior to cowpeas. The seed should not be planted until the ground has become warm. Plant a peck to a half bushel per acre, in rows 5 feet apart and 2½ to 3 feet apart in the row. Also grown with corn. Plant the corn in 5-foot rows and 3 feet apart in the row. The Beans are planted between the hills, and at the last working they are planted between the rows. Frequently stock is turned into the field and no attempt made to harvest the corn, or sometimes the ears are pulled from the stalks before the animals are turned in to graze. Inoculate your seed for best results. See above.

90 Days Early Speckle

713 This is the most valuable and popular variety. It is very prolific and can be planted later than other sorts on account of its early maturity. Makes a wonderful growth of vines for pasturing, and is a fine soil-improver. For the good of the land, grow Velvet Beans, and for the good of the cow, grow Velvet Beans. Two pounds of Velvet Beans in the pod will be found equal for milk production to one pound of cotton-seed meal. **Lb. 40c; 2 lbs. 65c; 5 lbs. \$1.35.** For larger quantities, see price-list in back of catalog.

Bush or Bunch

714 Grows 3 feet high. Matures in 120 days. Very popular as a green-manure crop in orchards. Best for growing in corn as the plants do not vine and weigh down the stalks. May also be grown with other crops. Easily harvested. **Lb. 50c; 2 lbs. 90c; 5 lbs. \$2.00.** For larger quantities see price-list in back of catalog.

SOY BEANS

PELICAN

PALMETTO

719 (Matures in 165 days.) It produces an excellent quality of hay; the leaves and stems are of medium size. On less fertile soil, the plants grow erect, while the branches have twining terminals. The height of the plant or length of vine is approximately 6 feet. The Palmetto has produced three tons in tests at Baton Rouge. The seed is straw yellow with black hilum, and of medium size. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. For larger quantities see price list in back of catalog.

MAMLOXI

704 (Matures in 130 days.) A Mammoth Yellow and Biloxi, developed by the Delta Experiment Station. It's the highest producing of all strains tested at the station, having produced above 50 bushels per acre. It is much better than Biloxi for hay, grazing, planting in corn and soil building. Shatters less than any other variety. Mamloxi is the best edible Soy Bean yet developed, and should be considered in our food production program. Sow 2 bushels per acre broadcast to produce more hay and better quality than any other upright bean. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. For larger quantities see price list in back of catalog.

S-100

717 (Matures 120 days.) Matures 15 to 20 days earlier than Ogden, so it can be planted as late as June. It is a high yielding variety and is uniform, of medium height and stands up well, seldom shattering. The seed is small to medium in size, and of yellow color. This variety has given good performance for the past few years. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. Quantity prices in back of catalog.

OGDEN

711 This is a heavy yielding and non-shattering variety with heavy oil content. Yields in past seasons have been reported as high as 30 to 50 bushels per acre. Our opinion is that every Soy Bean conscious farmer should at least try this outstanding variety. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. Quantity prices in back of catalog.

MAMMOTH YELLOW

707 (Matures in 145 days.) Grows more than 3 feet high and can be cut with a mower. A good hay bean used by many farmers for an early hog and cattle crop. Drill in rows 3 feet wide, using $\frac{1}{2}$ bushel of seed per acre, or broadcast a bushel to the acre. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. Quantity prices in back of catalog.

Biloxi

708 (Matures in 165 days.) For grazing, for hogging down with corn, and for soiling it is unexcelled. Best results when planted in rows 3 to 5 feet wide. Yields 10 to 15 tons of green forage per acre. Will stand wet, drought. One bushel plants $1\frac{1}{2}$ to 2 acres. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. For larger quantities see price list in back of catalog.

705 (Matures in 145 days.) An excellent early maturing, new, yellow Soy Bean, developed by Louisiana State Department of Agriculture. It is a very strong grower with a heavy crop of foliage, making it particularly valuable as a cover crop. It is a free seeder and produces from 20 to 30 bushels of seed per acre. The seed does not scatter as readily as other varieties of Soy Beans. Pelican is the first yellow seeded Soy Bean that compares favorably with the popular Avoyelles and will, no doubt, replace same in many sections when it becomes better known. One bushel will plant 3 to 3 $\frac{1}{2}$ acres if sown in rows 3 feet apart. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. For larger quantities see price list in back of catalog.

O-TOO-TANS

709 (Matures in 170 days.) The most popular main-crop hay and soil-improving Soy Bean. Compared to velvet beans, it makes a better cover crop, does not overrun trees or fences, and can be cut for hay if wanted. There is no legume combined into the soil. Produces 4 to 6 tons of dry hay, or 10 to 15 tons of green forage per acre. It is seldom affected by wet or dry weather. Less liable to shatter than other sorts. Plant in rows $2\frac{1}{2}$ to 3 feet apart, 4 to 8 inches apart in drill. A bushel will plant 3 to 4 acres solid, or from 6 to 8 acres in corn middles. Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.50. For larger quantities see price list in back of catalog.

AVOYELLES

706 (Matures in 170 days.) This type is widely and successfully grown in Louisiana. The leaves and stems are large and coarse and the plant is a semi-viny, bushy type. The seeds are dull black and slightly larger than the O-too-tans. It produces 25 to 30 bushels of seed per acre. Yields over 3 tons of cured hay per acre. Louisiana planters prefer it to the O-too-tans because the Soy Bean caterpillars show a preference for O-too-tans when both are grown in the same field. One bushel plants $2\frac{1}{2}$ to 3 acres in rows $2\frac{1}{2}$ to 3 feet apart, 4 to 8 inches apart in drill. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. For larger quantities see price list in back of catalog.

CLEMSON

715 (Matures in 165 days.) This variety produces an excellent quality of hay. The plants grow erect on less fertile soil, while the branches have twining terminals. Stems and leaves are of medium size. The plant or length of vine grows to a height of approximately 6 feet. The seed is of medium size with black hilum, and of a straw-yellow color. One bushel will plant 2 to 3 acres if sown in rows $2\frac{1}{2}$ to 3 feet apart. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20.
716 TALL-GROWING SHATTERPROOF. Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.20. For larger quantities see price list in back of catalog.
